

The Charlotte Fire Department supports the "Public Safety Improvement Coalition" position to thoroughly investigate the technical solution to the public safety 800 Mhz interference issues. In addition, we support delaying any consideration of disruptive and costly re-banding as described in the "Consensus Plan" until a complete determination of the best solution is made. The risk and cost to public safety of the Consensus Plan is extremely high. Any other solution must be fully investigated and tested before undertaking the disruptive and risky Consensus Plan.
